

Success Cases

SECURITY FOR THE DIGITAL AGE

The solution consist with the implementation of security best practices among all components of a cloud based infrastructure such as FIPS and CIS benchmarks, including hardening base operating system images and microservices components, system vulnerabilities reduction, threat model designs and security assessments.

- Migration to cutting edge technologies implemented cloud-wide and upgrade of current ones.
- creation of a full audit event logging solution; high availability ensurance by redesigning the whole system architecture.
- FedRAMP certification toward doing business with the U.S. government.
